Pile reversal, commonly known as shading in cut pile carpets, occurs when pressure causes the fibres to lie in different directions, altering light reflection and making some areas look lighter or darker. Though the appearance can be noticeable, this is not a manufacturing fault and will not affect the performance of this carpet. **Track Resistant** rating is determined by comparison of comparable quality cut pile products. **Solid shade** carpets may exhibit colour streaking. Tufting of this carpet may incur **shift lines** across the width of the carpet. These are not manufacturing faults and will not affect the performance of this carpet. **Dye batch colour variations** may occur from batch to batch. **Variation specifications** subject to ± 5% variation. **Patterned carpets** with directional designs may be subject to pattern distortion. Exact pattern match cannot be guaranteed.

Our goods come with guarantees that cannot be excluded under the Australian Consumer Law.
